

Unit 6 (a)

Nominal groups

Below the clause (1)

Grammar presentation given on 21.v.2018

Robert Spence
Angewandte Sprachwissenschaft
Universität des Saarlandes

The learning goals for today's session are:

γρ

The learning goals for today's session are:

- 1 To understand the difference between groups and phrases.

The learning goals for today's session are:

- ① To understand the difference between groups and phrases.
- ② To become familiar with the various functional roles that words can have in nominal groups, in particular the many different roles that adjectives can have.

The learning goals for today's session are:

- ① To understand the difference between groups and phrases.
- ② To become familiar with the various functional roles that words can have in nominal groups, in particular the many different roles that adjectives can have.
- ③ To learn to analyse the two dimensions of nominal group structure: experiential and logical.

The learning goals for today's session are:

- ① To understand the difference between groups and phrases.
- ② To become familiar with the various functional roles that words can have in nominal groups, in particular the many different roles that adjectives can have.
- ③ To learn to analyse the two dimensions of nominal group structure: experiential and logical.
- ④ To understand the mismatches between experiential and logical structure in nominal groups.

The learning goals for today's session are:

- ① To understand the difference between groups and phrases.
- ② To become familiar with the various functional roles that words can have in nominal groups, in particular the many different roles that adjectives can have.
- ③ To learn to analyse the two dimensions of nominal group structure: experiential and logical.
- ④ To understand the mismatches between experiential and logical structure in nominal groups.
- ⑤ To understand some of the most important differences between nominal groups in English and German.

Below the clause: groups and phrases

Consider the following clause:

Very gradually
the old man
has been growing
more forgetful
in recent years.

This is made up of the following groups and phrases:

nominal group: *the old man*
verbal group: *has been growing*
adverbial group: *very gradually*
adjectival group: *more forgetful*
prepositional phrase: *in recent years*

Note: inside *in recent years* is the nominal group *recent years*

You can also have the following:

preposition group: *right behind* (in: *right behind the door*)
conjunction group: *just because* (in: *just because he came late*)

Groups vs. phrases: internal structure

γρ

Groups vs. phrases: internal structure

- A group is a “bloated word” – a word that is modified by other words:

The image shows two large, stylized, green Greek letters, gamma (γ) and rho (ρ), positioned side-by-side. The letters are thick and have a slightly irregular, hand-drawn appearance. They are set against a light gray background that occupies the right side of the slide.

Groups vs. phrases: internal structure

- A group is a “bloated word” – a word that is modified by other words:

trains

electric trains

old electric trains

splendid old electric trains

two splendid old electric trains

those two splendid old electric trains

Groups vs. phrases: internal structure

- A group is a “bloated word” – a word that is modified by other words:

trains

electric trains

old electric trains

splendid old electric trains

two splendid old electric trains

those two splendid old electric trains

- A phrase is a “shrunk clause” – a clause that has lost its Subject, its Finite, its MOOD choices, etc; but it still has a remnant of TRANSITIVITY:

Groups vs. phrases: internal structure

- A group is a “bloated word” – a word that is modified by other words:

trains

electric trains

old electric trains

splendid old electric trains

two splendid old electric trains

those two splendid old electric trains

- A phrase is a “shrunk clause” – a clause that has lost its Subject, its Finite, its MOOD choices, etc; but it still has a remnant of TRANSITIVITY:

He wrote out the formula. He used a piece of chalk.

- He wrote out the formula, using a piece of chalk.
He wrote out the formula with a piece of chalk.

Further examples of groups

grows
was growing
has been growing
will have been growing

forgetful
more forgetful
much more forgetful
very much more forgetful

gradually
very gradually
really very gradually

Groups and phrases: functions in clauses

Table 6(1) Group and phrase classes in relation to clause function

		modal structure	experiential structure
groups	nominal	Vocative	–
		Subject, Complement	participant role (Medium, Agent, Range, Beneficiary)
	verbal	Finite + Predicator	Process
	adverbial	Adjunct (circumstantial)	circumstance role (primarily Manner: quality, Manner: degree)
		Adjunct (modal)	–
conjunction	Adjunct (textual)	–	
phrases	prepositional	Adjunct (circumstantial)	circumstance role (Location, Extent, Manner, Cause . . .); participant role with special textual status
		Adjunct (modal)	–
		Adjunct (textual)	–

Experiential structure of nominal group: functions and (word) classes

those	two	splendid	old	electric	trains
Deictic	Numerative	Epithet ₁	Epithet ₂	Classifier	Thing
determiner	numeral	adjective	adjective	adjective	noun

Fig. 6-1 Experiential structure of part of a nominal group

The nominal group system of DETERMINATION (a.k.a. DEIXIS)

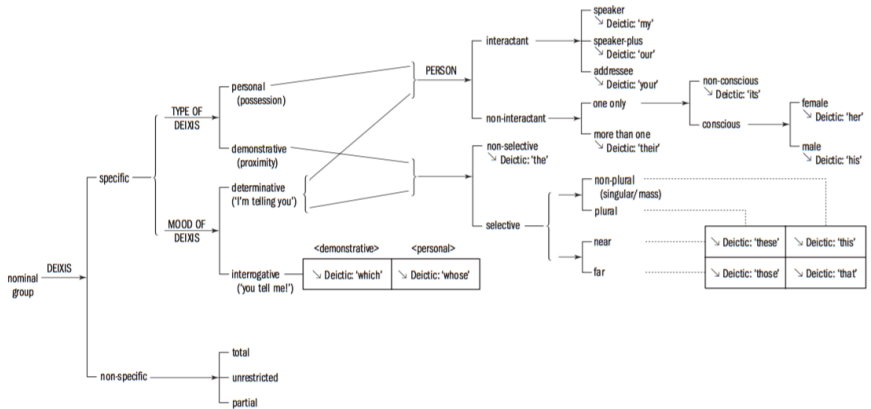

Fig. 6-2 The nominal group system network: DETERMINATION

Determiners or [embedded] ngps functioning as specific Deictic

Table 6(2) Items (determiners, or [embedded] nominal groups) functioning as specific Deictic

	Determinative			Interrogative
Demonstrative	this	that		which(ever)
	these	those		
			the	what(ever)
Possessive	my	your	our	whose(ever)
	his	her	its	
	their			
	one's			
	[John's]			[which person's], etc.
	[my father's], etc.			

Determiners functioning as non-specific Deictic

Table 6(3) Determiners functioning as non-specific Deictic

		singular		non-singular		unmarked
				Dual	Mass/plural	
total	positive	each every		both	all	
	negative		neither (not either)			no (not any)
partial	selective	one	either			some [sΛm] any
	non-selective	a(n)			some [sm]	
		'one'	'two'		'not one'	(unrestricted)

Note:

1) /sm/ is quite different from /sΛm/, because (unlike /sm/) /sΛm/ can be used with a singular count(able) noun:

'In three weeks England will have her neck wrung like a chicken.' *Some chicken! Some neck!* – Churchill

2) As an alternative to /sm/ you can have the zero article: *some trains* vs. *trains*; *some electricity* vs. *electricity*.

Parallel between specific and non-specific determiners

Table 6(4) Parallel between specific and non-specific determiners

	'weak' determiner [cannot be Head]	'full' determiner [may be Head]	non-personal pronoun [Head]
specific	the	that	it
non-specific	a(n)	one	there

There are two different systems of NUMBER in English

Table 6(5) Number in specific nominal groups

Non-plural		Plural
Singular	Mass	
this train	this electricity	these trains

Table 6(6) Number in non-specific nominal groups

singular	non-singular	
	mass	plural
a train	(some) electricity	(some) trains

Table 6-7 Nominal groups referring to members of a class ('particular') or to the class itself ('general')

			Singular	Mass	Plural	
non-specific [Table 6-6]			singular [a(n)]	non-singular [(some)]		
specific [Table 6-5]			non-plural [this]		plural [these]	
(i) particular (members)	non-specific		<i>there was an elephant in the glade</i>	<i>there were (some) elephants in the glade / there was (some) water in the river</i>		
	specific		<i>the/this elephant charged / the/this water was brownish</i>		<i>the/these elephants charged</i>	
(ii) general (class)	as Attribute	non-specific	<i>this is an elephant</i>	<i>these are elephants / this is water</i>		
		specific	-- --	-- --	-- --	
	as other than Attribute	non-specific	<i>[1] an elephant lives long</i>	<i>[2] elephants live long / water consists of hydrogen and oxygen</i>		
		specific	<i>[3] the elephant lives long</i>	--	---	

Adjectives frequently occurring as post-Deictic (“postdeterminers”)

Table 6(7) Adjectives frequently occurring as post-Deictic

type	sub-type		examples
expansion	elaborating	identity	identical, same; different ('non-identical'), other [note a + other, another]; respective
		exemplification	certain, particular, given; various, different ('various'), odd; famous, well-known, infamous, notorious; special
	extending		complete, entire, whole
	enhancing	space-time	above, aforementioned, earlier, preceding; subsequent, future
comparison		similar, different ('non-similar'), comparable	
projection	modality: modalization	probability	certain, possible, probable
		usuality	customary, habitual, normal, ordinary, typical, usual, regular
	modality: modulation	obligation	necessary, required
		readiness	intended, desired
	report	locution	alleged, so-called, self-styled
		idea	hypothetical, purported, expected, evident, obvious

NB: Now you can easily have up to four different (types of) adjectives in a nominal group, without needing a single comma to separate them!:

the usual two splendid old electric trains

Achtung! *another two splendid old electric trains*

Achtung! *our own beautiful new home* →
unser schönes neues Eigenheim

Numerals or [embedded] nominal groups functioning as Numerative

Table 6(8) Items (numerals, or [embedded] nominal groups) functioning as Numerative

	definite	indefinite
quantitative	one two three, etc. [a couple of], etc., [a quarter of], etc.	few little [a bit of], etc., several [a number of], etc., many much [a lot of], etc. fewer less more [the same amount of], etc.
ordinative	first second third, etc., next last	preceding subsequent, etc.

Translate into French, Spanish, and German:

1) *the next ten days*

2) *the last ten days*

Verbs as Epithets or as Classifiers (IFG3 p321)

Verb as Epithet

- (i) a galloping horse ('a horse which is galloping')
- a bleeding nose ('a nose which is bleeding')

If however the verb is one which does not normally take the 'present in present' tense *be* . . . *ing* (i.e. a verb expressing a mental or relational process), the distinction between 'which . . . s' and 'which is . . . ing' is neutralized; the next pair of examples are also Epithets:

- the resulting confusion ('the confusion which results')
- a knowing smile ('a smile which [suggests that the smiler] knows')
- (ii) a wrecked car ('a car which has been wrecked')
- a fallen idol ('an idol which has fallen')

Verb as Classifier

- (i) a stopping train ('a train which stops')
- a travelling salesman ('a salesman who travels')
- (ii) a tied note ('a note which is tied')
- spoken language ('language which is spoken')

The Qualifier is usually an embedded higher-rank unit (phrase / clause)

(a)

the	children	[in [blue hats]]
Deictic	Thing	Qualifier
determiner	noun	prepositional phrase

(b)

the	children	[[wearing blue hats]]
Deictic	Thing	Qualifier
determiner	noun	clause, non-finite

(c)

the	children	[[who are wearing blue hats]]
Deictic	Thing	Qualifier
determiner	noun	clause, finite

Fig. 6-3 Nominal group with (a) prepositional phrase, (b) non-finite clause and (c) finite clause as Qualifier

The Qualifier exemplifies the principle of END WEIGHT – if it's long and/or complicated, put it at the end.

Pre-Modification or “Post-Modification”?

γρ

Pre-Modification or “Post-Modification”?

Pre-Modification: fixed, standard classification (dem **WESEN** nach)

Pre-Modification or “Post-Modification”?

Pre-Modification: fixed, standard classification (dem **WESEN** nach)

Post-Modification: one-off, ad hoc classification (den **ZUSTÄNDEN** nach)

Pre-Modification or “Post-Modification”?

Pre-Modification: fixed, standard classification (dem **WESEN** nach)

Post-Modification: one-off, ad hoc classification (den **ZUSTÄNDEN** nach)

A common problem in an English-language scientific article written by a German-speaker:

Pre-Modification or “Post-Modification”?

Pre-Modification: fixed, standard classification (dem **WESEN** nach)

Post-Modification: one-off, ad hoc classification (den **ZUSTÄNDEN** nach)

A common problem in an English-language scientific article written by a German-speaker:

[Denglish:] *the used mixtures*: ‘die angewendeten Mischungen’ (‘the mixtures **that were used**; the mixtures **used**’)

Pre-Modification or “Post-Modification”?

Pre-Modification: fixed, standard classification (dem **WESEN** nach)

Post-Modification: one-off, ad hoc classification (den **ZUSTÄNDEN** nach)

A common problem in an English-language scientific article written by a German-speaker:

[Denglish:] *the used mixtures*: ‘die angewendeten Mischungen’ (‘the mixtures **that were used**; the mixtures **used**’)

[English:] *the used mixtures*: ‘die verbrauchten/aufgebrauchten Mischungen’ (‘the now **useless** mixtures’)

Pre-Modification or “Post-Modification”?

Pre-Modification: fixed, standard classification (dem **WESEN** nach)

Post-Modification: one-off, ad hoc classification (den **ZUSTÄNDEN** nach)

A common problem in an English-language scientific article written by a German-speaker:

[Denglish:] *the used mixtures*: ‘die angewendeten Mischungen’ (‘the mixtures **that were used**; the mixtures **used**’)

[English:] *the used mixtures*: ‘die verbrauchten/aufgebrauchten Mischungen’ (‘the now **useless** mixtures’)

IN GERMAN YOU CAN EMBED A NON-FINITE CLAUSE IN THE PRE-MODIFIER:

1) *die erst kürzlich entdeckte Iriomote-Katze*

2) *die von Forschern erst kürzlich entdeckte Iriomote-Katze*

(i.e. participle *entdeckt* is like verb, and has TRANSITIVITY (valence))

Pre-Modification or “Post-Modification”?

Pre-Modification: fixed, standard classification (dem **WESEN** nach)

Post-Modification: one-off, ad hoc classification (den **ZUSTÄNDEN** nach)

A common problem in an English-language scientific article written by a German-speaker:

[Denglish:] *the used mixtures*: ‘die angewendeten Mischungen’ (‘the mixtures **that were used**; the mixtures **used**’)

[English:] *the used mixtures*: ‘die verbrauchten/aufgebrauchten Mischungen’ (‘the now **useless** mixtures’)

IN GERMAN YOU CAN EMBED A NON-FINITE CLAUSE IN THE PRE-MODIFIER:

1) *die erst kürzlich entdeckte Iriomote-Katze*

2) *die von Forschern erst kürzlich entdeckte Iriomote-Katze*

(i.e. participle *entdeckt* is like verb, and has TRANSITIVITY (valence))

IN ENGLISH:

1) *the only recently discovered Iriomote cat*

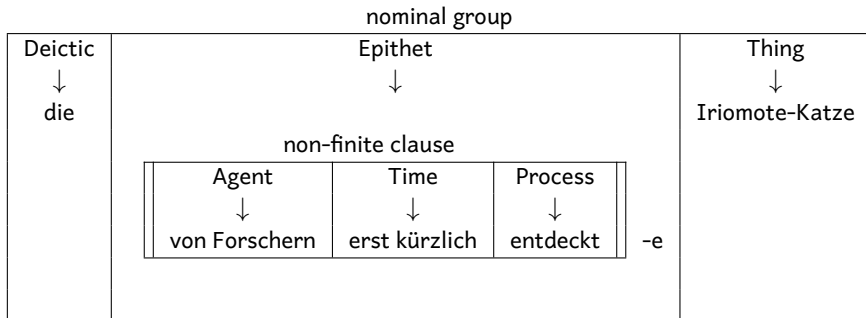

(δ :) *the* (γ :) [*(γ :) only (β :) recently (α :) discovered*] (β :) *Iriomote* (α :) *cat*

i.e. participle *discovered* is like adjective, can be modified by adverb

The only way to do 2) in English is:

2) *the Iriomote cat [[which was] only recently discovered by scientists]]*

That Iriomote Cat again

Epithet or Classifier? – order of adjectives in more detail

Matthew Anderson

Things native English speakers know, but don't know we know:

adjectives in English absolutely have to be in this order: opinion-size-age-shape-colour-origin-material-purpose Noun. So you can have a lovely little old rectangular green French silver whittling knife. But if you mess with that word order in the slightest you'll sound like a maniac. It's an odd thing that every English speaker uses that list, but almost none of us could write it out. And as size comes before colour, green great dragons can't exist.
